

```

// Assuming you have connected to your MongoDB instance

// Selecting a database
const myDatabase = client.db("myDatabase");

// Selecting a collection within that database
const myCollection = myDatabase.collection("myCollection");

// Creating a document (component) to insert
const myDocument = {
  name: "ComponentName",
  property1: "value1",
  property2: "value2"
};

// Inserting the document into the collection
myCollection.insertOne(myDocument);

```

```

import React from 'react';

const MyComponent = () => {
  return (
    <div>
      <h1>This is my component</h1>
      <p>Component content goes here</p>
    </div>
  );
};

export default MyComponent;

import React from 'react';
import MyComponent from './MyComponent';

const App = () => {
  return (
    <div>
      <h1>Welcome to my MERN app</h1>
      <MyComponent />
    </div>
  );
};

```

```
};
```

```
export default App;
```
